

MongoDB and Studio3T Setup

MongoDB Cluster Setup

1. Visit <https://cloud.mongodb.com/> and create your account.
2. Once logged in, create a new Project

The screenshot shows the MongoDB Cloud console interface. On the left is a sidebar with a menu under 'ORGANIZATION' containing 'Projects', 'Alerts 0', 'Activity Feed', 'Settings', 'Access Manager', 'Billing', and 'Support'. The 'Projects' item is highlighted. The main content area is titled 'GEORGE MASON UNIVERSITY > PROJECTS' and 'Create a Project'. It features two tabs: 'Name Your Project' (active) and 'Add Members'. Below the tabs, the 'Name Your Project' section includes a text input field with the value 'AIT580' and a note stating 'Project names have to be unique within the o'.

3. Once a project is created, you can create mongodb cluster (server). Click on Build a Cluster

Create a cluster

Choose your cloud provider, region, and specs.

Build a Cluster

4. Choose Share Cluster (Free) and click Create Cluster
5. Select AWS (default) and click Create Cluster. Make sure to choose all the free options.

LINKED REALM APP

None Linked

8. Click Connect button.
9. Click on Allow Access from Anywhere option and click on Add An IP Address
10. Create a Database user of your own choice and click create database user button.

You're ready to connect. Choose how you want to connect in the next step.

1 Add a connection IP address

✓ An IP address has been added to the IP Access List. [Add another address in the IP Access List tab.](#)

2 Create a Database User

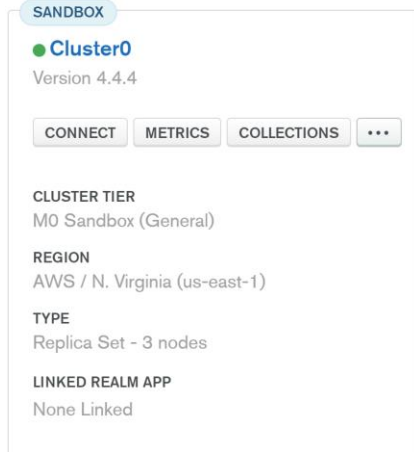

✓ A MongoDB user has been added to this project. *Not yours? Create one in the [MongoDB Users](#) tab.*

You'll need your MongoDB user's credentials in the next step.

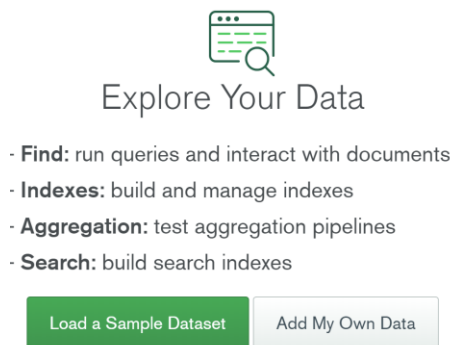

Close

Choose a connection method

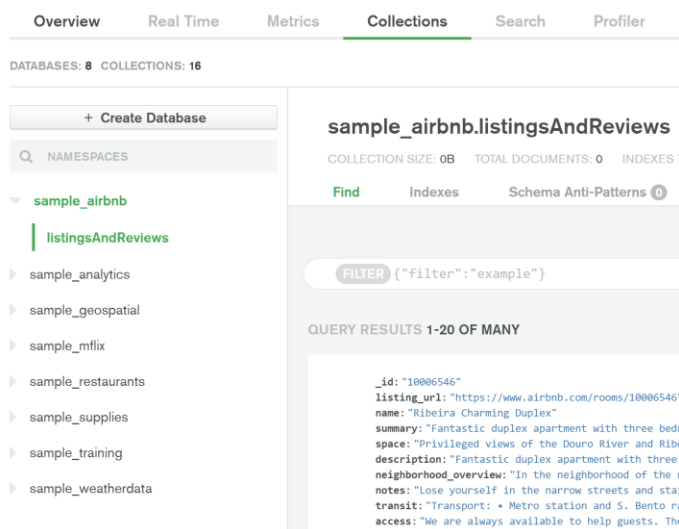

11. Click on Choose a connection method button.
12. Click on Connect using MongoDB Compass
13. Copy the connection string. We will use it in Studio3T.
14. Go back to Cluster Menu and click Collections

15. Click on Load Sample Data and confirm Load Sample Dataset (around 350MB)

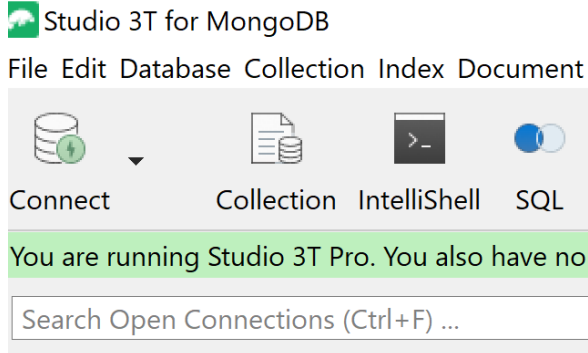

16. This will take some time. Press the refresh button to see the sample datasets.

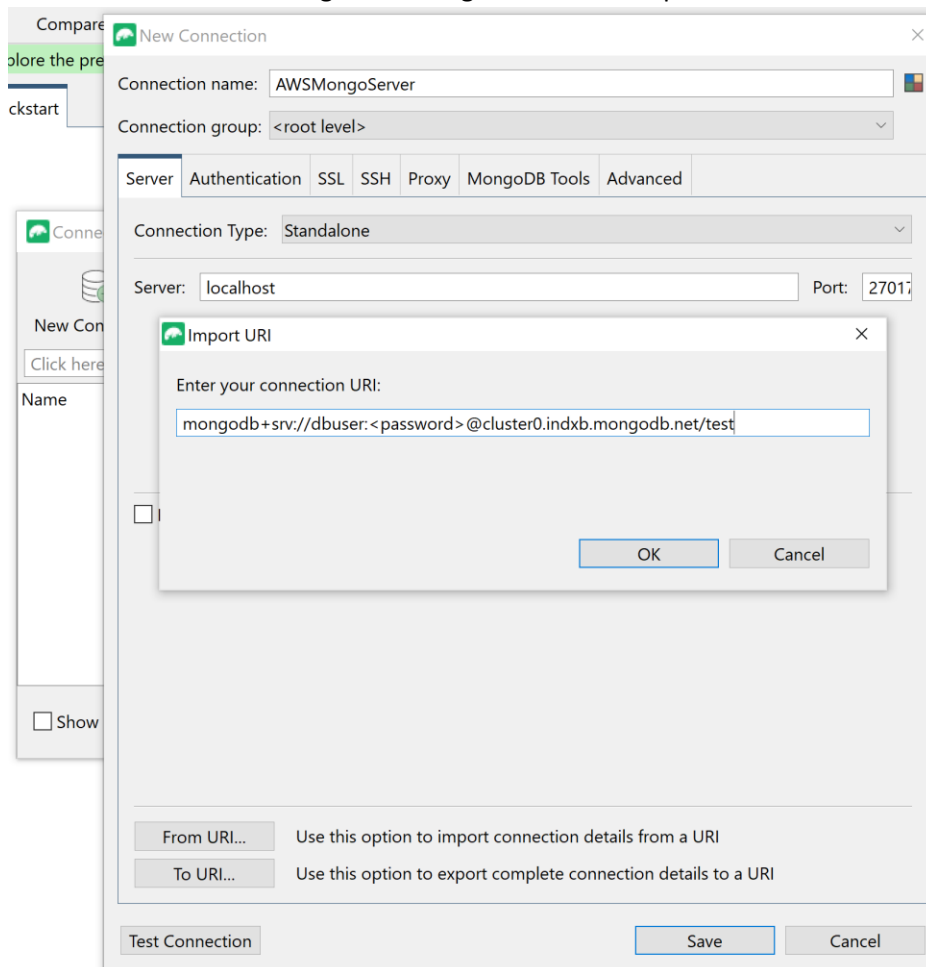

Studio 3T Setup

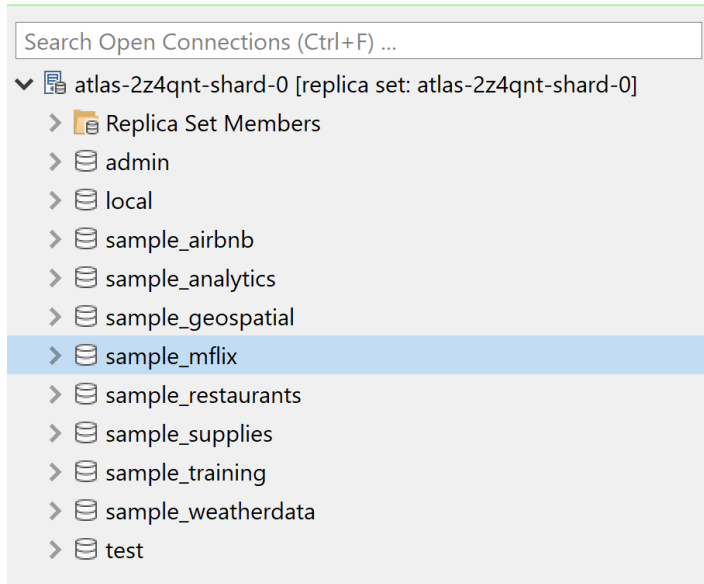

1. Install Studio 3T from <https://studio3t.com/>
2. Run Studio 3T after installation.
3. Click Connect button

4. Click new connection. Type connection name of your own choice.
5. At the bottom, click on the button From URI
6. Paste the connection string from MongoDB server and press ok

7. Go to authentication and provide your MongoDB user and password.
8. Press ok and then press connect. If successful, you will see three databases

9. You are all set to work on NoSQL data.
